

CS4500 Software Development

Final Deliverables Team 41

Overall Feedback

Can access features that should be behind a login making security a major issue. Prototype is nicely useable.

Comments on the System Setup Video

Good Job

Comments on the System Demo Video

Good Job

Comments on the Problem Overview

Good Job

Comments on Result Overview

Good Job

Comments on Result Overview

Explained well!

Comments on the Retrospective

Retrospective was too long.

Comments on use cases

Good work adding an index at the top. Professionally presented use cases.

Comments on UML diagrams

Sequence diagram would have been helpful to understand the system flow.

Comments on live system

Some team members were technically good at working on backend while some had decent expertise in the frontend. However; there work could be a little better given their expertise.
